Atlas B125 Chamber

Modular Duct Access Chamber System

Atlas Manhole Chamber are preformed structural duct chambers designed specifically for any underground cable access application.

Chambers are manufactured to comply with NJUG standards and offer the following key advantages over traditional rotational moulded chamber liners;

- 150mm deep sections for variable chamber depth
- No concrete surround required
- 110mm duct entry knockouts as standard
- Able to accommodate other duct sizes
- 100% Recyclable/Recycled material
- Easy push fit stackable construction
- Lightweight to comply with Manual handling regs
- One man lift for H & S requirements

Street Lighting – Traffic Signals – Telecommunications – CCTV – Rail Infrastructure

Atlas chamber sections act both as a duct entry and raising piece - No need to order separately.

Easily drilled on site to suit other duct sizes

- No concrete surround required for B125 applications
- Use with our Ductile Iron cover and frame & “anti-slip” B125 composite covers
- Swift knockout duct entry
- Variable chamber depth to suit minimum depth to duct requirements
- Reduced costs and installation times
- For use as cable drawpits, access chambers, inspection pits and turning chambers
- Can also be used in block paved areas with a suitable frame
