EasyLiner

Modular Duct Access Chamber System

EasyLiner is a lightweight yet rigid chamber which can be easily assembled. All components lock together, making EasyLiner a robust chamber which is suitable for a variety of uses. This chamber system is normally concrete back filled and offers an alternative to rotationally moulded liners, over which EasyLiner has cost and technical advantages.

The chamber can be supplied fully assembled or flatpacked.

All components are made from recycled plastic, strong polypropylene, and are recyclable at the end of use.

Ring height = 320mm

Sides available 300mm, 450mm and 600mm

wall thickness = 58mm

Street Lighting – Traffic Signals – Telecommunications – CCTV – Rail Infrastructure

EasyLINER chamber sections act both as a duct entry and raising piece - No need to order separately.

Easily drilled on site to suit other duct sizes

- Concrete Surround is needed
- Use with our Ductile Iron cover and frame & “anti-slip” B125 composite covers
- Swift knockout duct entry
- Variable chamber depth to suit minimum depth to duct requirements
- Reduced costs and installation times
- For use as cable drawpits, access chambers, inspection pits and turning chambers
- Can also be used in block paved areas with a suitable frame

Ref	Size	Loading
EL3030	300 x 300 x 320	N/A
EL4545	450 x 450 x 320	N/A
