MH-B-JB4C-LKD	2330 x 1110mm	2010 x 910mm	52mm	N/A	Yes

FRAME

The single cover has a Ductile Iron Frame and has an outside flange to optimise its hold in the concrete. The Modular Covers have a Galvanised Angle Iron Frame and has a T Bar to aid in the removal of the cover. It doesn't have gaskets and its stability is guaranteed by metal on metal contact.

COVER

It is rectangular in shape, it guarantees a good stability thanks to the height of the border and insertion depth not less than 50 mm, it comes with 2 dead holes, which allows the insertion of a suitable Keys to lift the cover (supplied on request) and then slid out. All the covers are interchangeable. The upper surface is non-skid and has been designed to allow the complete flow of water and avoid the formation of ice. The cover is **locked** as standard.

INTENDED USE

It is designed for pedestrian walkways and similar areas, parking areas for all types of road vehicles including multi-stored car parks (see norm EN 124 group 2). Product is 3rd party certified, and a copy is available on request.

TREATMENT

The manhole cover and the Single frame has a protective coating of black paint and the Modular Frame is galvanised after manufacture.
